We meet Australia data sovereignty requirements.

Experience up to 10 times lower latency with our Australian points of presence.

Get started in minutes, provision new desktops on demand through our easy to use online portal.

Responsive and high quality 24 x 7 Australian support.

## Why Enterprise Desktop as a Service

CloudCentral's Enterprise Desktop as a Service delivers secure, full-featured Windows virtual desktops at a lower cost of ownership. New desktops can be provisioned on demand with a true pay-as-you-grow model.

CloudCentral Enterprise Desktop as a Service is a centralized virtual Windows desktop environment. It can be accessed from any device including iPhone, iPad, Android, PC, Mac and any other device that supports the Remote Desktop Protocol. Our services are simple to manage and scale through our self-service online portal.

## Optimise Business Performance

The bottom line is CloudCentral's Enterprise Desktop as a Service lets you shift resources away from provisioning and managing desktops. You have more control over data access as it will be stored and managed centrally. You can focus on innovative new projects or simply do more with fewer resources.

Ease migration or extend the life of your physical desktops with CloudCentral Enterprise Desktop as a Service. We provide network peering exchange, replicated storage, daily backup and Australian Government security clearances.

Leverage our highly optimized remote desktop that works well over low-bandwidth Internet connections.

## Australian

CloudCentral Enterprise Desktop as a Service is available from data centres hosted in Australia hence provides low latency and local access. As an Australian owned and hosted provider we comply with Australian data sovereignty requirements and so you can have the confidence that your personal data is not transferred out of Australia.

## Personal Service

If you need help understanding which solutions will meet your needs, we'll take the time to get to know you and what your business challenges are.

## Microsoft Remote Desktop Services

Remote Desktop Services (RDS) accelerates and extends desktop and application deployments to any device, improving remote worker efficiency, while helping to keep critical intellectual property secure and simplify regulatory compliance. Remote Desktop Services enables virtual desktop infrastructure (VDI), session-based desktops, and applications, allowing users to work anywhere.
